T&S low-flow spray valves (shown in green) exceed the federal standards, as well as all major competitors, in both water usage and cleaning time. You can save as much as 100,000 gallons* of water per year!

The most efficient spray valves on the market

In 1947, T&S introduced the first pre-rinse unit to the foodservice industry. Four decades later we created the first low-flow unit designed to save water and energy. Our units were the first to be endorsed by the Green Restaurant Association.

Today, T&S is taking pre-rinse innovation to the next level with our new B-0107-C and B-0108-C spray valves. We've kept all of the superior construction we've become legendary for. This time, though, the unit uses way less water than ever before while still cleaning just as fast.

B-0107-C

High-performing low-flow

- Available in B-0107-C and ergonomic B-0108-C models
- Flows at **.65 gallons per minute** at 60 psi
- Exceeds ASTM tomato paste test cleaning standard by FSTC
- Fashioned from top-quality materials
- Backed by reliable T&S service support
- Available via QuickShip

B-0108-C

Enjoy top quality T&S construction. Our outstanding service support. A pre-rinse valve designed to beat the strictest of standards while still delivering powerful performance and a low, low flow rate of .65 gallons per minute. **Save up to 100,000 gallons*** every year vs. spray valves rated at 1.6 gpm.

Choose the T&S low-flow spray valves and watch your savings begin to fill up. Contact your sales representative or visit www.tsbrass-lowflow.com to start harnessing the power of less.

*Assumptions: 5 hours/day, 365 days/year = 109,500 minutes
