Handling educational facilities

At Travelers Rest High School (TRHS) in Travelers Rest, South Carolina, the 1,250 students keep their teachers busy — and, with many days stretching longer than 12 hours of building use, they also put their plumbing to the test. Fortunately for them, TRHS uses one manufacturer of plumbing fixtures and fittings throughout their entire campus: T&S Brass.

Plumbing that’s done its homework

As you might imagine, plumbing in a secondary school is going to get a workout. The reasons are many, at least as many as the number of people who use the buildings.

Every one of those 1,250 students at TRHS, for instance, is going to use the restroom at some point in the day. Hundreds are going to use the locker room showerheads after a competitive hour in PE class. Just as many will use the natural gas fittings in the science classroom, and dozens more will use sprayers and hose reels in the kitchen areas of the building, or dishwashers and concession-stand sinks in other parts of the school.

The school schedule can make for a long day, with many showing up before the official 8:30 am start time. A third of the students are involved in something after school, with many staying as late as 7:00 pm on school nights. That time gets pushed further — much further — on game nights, with the final students out at 10:00 pm on basketball nights or even 2:00 in the morning on football nights.

With well over a thousand students relying on their school’s facilities at any given time of day, it becomes clear the high standard TRHS fixture fittings need to meet. The good news? T&S products go far beyond a mere passing grade by delivering excellent performance over the anticipated decades and decades of a building’s life. We also offer the vandal-resistant options a school needs to ensure that even mischief won’t violently adjust the class day.
Fixture fittings that make the grade

High quality is one of the most important standards for school plumbing, but it is only one standard. What happens when a faucet, pre-rinse unit or gas fitting is ready for periodic maintenance, or even needs replacement for some reason?

The truth is that service, options and easy maintenance are also top priorities when it comes to choosing fixture fittings for a school setting. Fortunately, they’re also what T&S has become legendary for.

According to one school maintenance foreman, “They’re reliable. They last forever. And they’re not as easy to tear up as Kohler products are. In fact, in my experience T&S products will stand up 2 to 1 to Chicago or Kohler. The standard of quality is simply a whole lot higher.”

T&S fixtures are easy to work on. Repairs move rapidly, especially compared to other major manufacturers. Replacement parts get to you quickly.

Schools — they’re not just demanding for the students. Choose T&S fixture fittings and ensure that your school is ready for a long and productive life, ready for anything.
